

About

"Committed" is the word I'd use for myself — like in Git, a commit is the atomic building block, and I bring that care to every project and every layer of it. Over roughly three years I've built product features end-to-end from cloud infrastructure up to the UI, and I'm after a new challenge where I can keep taking that kind of ownership.

Experience

Jan. 2025 – Jun. 2026: Browsi Ltd. - Software Engineer

Designed and shipped product features end-to-end — from cloud infrastructure and server contracts through to the UI. Held working knowledge across the full product range and was frequently consulted on how the components integrated.

May 2024 – Jan. 2025: Ramat Gan Muni. - Software Engineer

Built and maintained the web infrastructure behind the municipality's public applications, including secure cloud deployments and fast, accessible content זמינות for residents.

Sept. 2023 – Jan. 2025: Self-employed - Software Engineer

Took on freelance projects throughout my studies to keep building outside the classroom — MVPs, prototypes, sites, and small applications on demand. Owned each end-to-end, from scoping with the client to choosing the stack and shipping on a tight timeline.

Education

Sept. 2020 - Aug. 2024: Shenkar – B.Sc. Software Engineering

Graduated with honors after receiving the dean's excellence award three years running. Focused on web development in cloud environments, which laid the groundwork for the scalable systems I build today.

Works

AI Presence – monitoring brand awareness across LLM models. Querying LLMs for brand mentions, then waterfalling the results into an analysis prompt to maintain non-bias. Utilizing various cloud services: ECS, Lambda, DynamoDB, SQS, EventBridge, Api Gateway. Written in Typescript over Node.js (Nest) with Snowflake for persistent storage of analysis results. [Docs](#)

Chat History – migrating chats with messages from client to server side. A thin Chat entity is stored in MySQL, while messages are stored in OpenSearch and clustered around the chat ID. Migrating the client required extensive use of design patterns, such as a facade that exports a unified interface, adapted by both legacy and new services, and factorized at runtime. [Docs](#)

Trend Signals – streaming brand performance insights to clients. A dedicated path within the agent's chain for specific action driven insights, Triggered periodically to follow evolving trends. [Docs](#)

Military Service

Mar. 2012 - Mar. 2015: IDF Combat Soldier - Nahal Infantry Brigade

Honorably discharged after completing full combat service. Operated across Israel's borders and beyond enemy lines in Gaza and Lebanon. Operating under demanding conditions that built the habits I still rely on — staying composed under pressure, working as a tight team, and adapting quickly when plans changed.
